Math 8

Lesson M3 ~ Calculating Volume of Right Rectangular Prisms, Right Triangular Prisms, & Cylinders

❖ Volume = Ah = Area of base x Height

- Area_{rectangle} = length x width
- Area_{triangle} = length x width ÷ 2
- Area_{circle} = $\pi \times r^2$

• Developing:

1. The area of the base and the height are shown on each rectangular prism. Determine the volume of each prism.

$$V = Ah$$

$$= \underline{\hspace{2cm}}$$

$$= \underline{\hspace{2cm}}$$

The volume is _____ cm^3 .

The volume is _____ cm^3 .

The volume is _____ m^3 .

2. Determine the volume of each prism.

$$A = \underline{\hspace{1cm}} \times \underline{\hspace{1cm}}$$

$$= \underline{\hspace{2cm}}$$

$$V = Ah$$

$$= \underline{\hspace{1cm}} \times \underline{\hspace{1cm}}$$

$$= \underline{\hspace{2cm}}$$

The volume is _____ m^3 .

The volume is _____ cm^3 .

The volume is _____ mm^3 .

1. The area of the base and the length of each prism are shown. Calculate the volume of each prism.

$$\begin{aligned}
 V &= A\ell \\
 &= \underline{\hspace{2cm}} \times \underline{\hspace{2cm}} \\
 &= \underline{\hspace{2cm}}
 \end{aligned}$$

The volume is _____.

The volume is _____.

2. Determine the volume of each prism.

a) $A = \underline{\hspace{1cm}} bh$

$$\begin{aligned}
 &= \underline{\hspace{1cm}} \times \underline{\hspace{1cm}} \times \underline{\hspace{1cm}} \\
 &= \underline{\hspace{1cm}}
 \end{aligned}$$

$$\begin{aligned}
 V &= A\ell \\
 &= \underline{\hspace{1cm}} \times \underline{\hspace{1cm}} \\
 &= \underline{\hspace{1cm}}
 \end{aligned}$$

The volume is _____.

The volume is _____.

The volume is _____.

1. The base area and height of each cylinder are given. Calculate the volume, to the nearest cubic unit.

Volume of a cylinder = base area \times height
 = _____ \times _____
 = _____

2. Calculate the volume of each cylinder, to the nearest cubic unit.

$V = \pi r^2 h$
 = $\pi \times$ _____ \times _____
 \doteq _____

The volume of the cylinder is _____, to the nearest cubic _____.

- Proficient:

7. Find the volume of each rectangular prism.

9. Each dogsled team that enters the Iditarod has a portable doghouse for each sled dog. Two mushers are comparing the sizes of their doghouses. Each of Rick's doghouses is 94 cm by 63 cm by 71 cm. Each of Susan's doghouses is 109 cm by 71 cm by 81 cm.
- What is the volume of each doghouse?
 - About how many times as great as the volume of Rick's doghouse is the volume of Susan's doghouse?

11. Large trucks often tow trailers that are shaped like right rectangular prisms. A standard trailer is 2.74 m by 2.43 m by 6.1 m.

- What is the greatest volume of cargo a standard trailer can hold?
- How many trailers would it take to transport 100 m^3 of goods? What assumptions do you make?

6. Find the volume of each prism.

10. Chico has a wedge of cheddar cheese. He plans to serve the cheese as an appetizer before dinner.

- What volume of cheese does Chico have?
- Suppose each person eats 20 cm^3 of cheese. How many people will the cheese serve?

- 12.** Jackie uses this form to build a concrete pad.

- a) How much concrete will Jackie need to mix to fill the form?
- b) Suppose Jackie increases the lengths of the equal sides of the form from 3 m to 6 m.
How much more concrete will Jackie need to mix?
Include a diagram.
- 8.** A hockey puck is a solid piece of rubber with the dimensions shown.
How much rubber is used to make a hockey puck?

- 10.** Kari has 125 mL of water. She wants to pour it into one of these cylindrical bottles. Which bottle will hold all the water? How do you know?
Bottle A: $d = 7$ cm, $h = 3$ cm
Bottle B: $r = 2$ cm, $h = 6$ cm
Bottle C: $r = 3.5$ cm, $h = 7$ cm
Bottle D: $d = 3$ cm, $h = 4$ cm
- 14.** A farmer has 3 cylindrical containers to hold feed. Each container has radius 91 cm and height 122 cm. What is the total volume of the three containers? How did you find out?

- Extending: please complete Proficient questions first.

- 10.** Suppose a milk carton is 10 cm wide and 10 cm long. How tall must the carton be to hold 1 L of milk?

Recall $1 \text{ cm}^3 = 1 \text{ mL}$.

- 12.** A rectangular swimming pool is to be filled with water. The pool has a uniform depth of 2 m and is surrounded by a wooden deck. The pool is 20 m wide and 50 m long. How much water is needed in each case?
- a) The pool is filled to the level of the deck.
 - b) The pool is filled to within 20 cm of the level of the deck.
 - c) The pool is half filled.

- 15.** Sketch a right rectangular prism. Label its dimensions. What do you think happens to the volume of the prism when:
- a) its length is doubled?
 - b) its length and width are doubled?
 - c) its length, width, and height are doubled?

Investigate to find out.

Show your work.

Will the results be true for all rectangular prisms?

Why do you think so?

- 8.** The volume of a right triangular prism is 30 cm^3 . Each triangular face has area 4 cm^2 . How long is the prism?

14. a) Find the volume of this prism.

- b) Suppose the prism contains 1350 mL of water.
What is the depth of the water?
- c) What percent of the volume of the prism is water?
11. **Assessment Focus** Frozen apple juice comes in cylindrical cans. A can is 12 cm high with radius 3.5 cm.
- a) What is the capacity of the can?
- b) What happens to the capacity of the can if the dimensions of the radius and height are switched?

17. **Take It Further**

A concrete column in a parkade is cylindrical. The column is 10 m high with diameter 3.5 m.

- a) What is the volume of concrete in one column?
- b) There are 127 columns in the parkade. What is the total volume of concrete?
- c) Suppose the concrete in part a is made into a cube.
What would the dimensions of the cube be?
